Some of the methods and models used in primary maths lessons are a bit different from what you may have used at school. The maths techniques and methods children are taught in schools now are based on giving them a deep understanding of mathematics and helping them to articulate that through explaining, discussing their work with each other and involving them in solving problems that apply to ...

foreign to most classical models of reality, quantum physics notwithstanding. This class surveys some of the key tools of applied math to be used at the interface of continuous and discrete. It is not on robotics or computer vision, nor does it cover any other application area. Applications evolve rapidly, but their mathematical foundations remain.
