S2 Diesel Engine

The Alco S2, like the S1, was born out of the company's long history (even by 1940) of studying and developing small diesel locomotives that dated back to 1918. Their first true diesel line came with the HH (High Hood) series that began in 1931. These switchers were developed in conjunction with McIntosh & Seymore and Westinghouse, the former providing the prime mover and the latter air components and a revolutionary cab design (the "Visibility Cab") that enabled crews maximum visibility.

The ALCO S2 and S4 were 1,000 horsepower diesel electric switchers produced by ALCO and Canadian licensee Montreal Locomotive Works. These two locomotive models differed only in that the earlier S-2 had ALCo#Blunt bogie trucks and the later S-4 had EMD#AARA bogie trucks. Both were powered by ALCO 539 turbocharged, 6-cylinder diesels. The S-2 was built between August 1940 and June 1950, with a total of 1502 completed, while the S-4 was constructed between June 1949 and August 1957 with total sale

The Grumman S-2 Tracker was the first purpose-built, single airframe anti-submarine warfare aircraft to enter service with the United States Navy. Designed and initially built by Grumman, the Tracker was of conventional design — propeller-driven with twin radial engines, a high wing that could be folded for storage on aircraft carriers, and tricycle undercarriage. The type was exported to a number of navies around the world. Introduced in 1952, the Tracker and its E-1 Tracer derivative saw ...
