4. If the work is being performed on the vehicle's air brake system, or any auxiliary pressurized air systems, make certain to drain the air pressure from all reservoirs before beginning ANY work on the vehicle. If the vehicle is equipped with an AD-IS™ air dryer system or a dryer reservoir module, be sure to drain the purge reservoir. 5.

Advanced Troubleshooting Guide for Air Brake Compressors

Foundation brakes are the most common air-brake systems found in trucks and buses and work the same way as in rail cars.Using the triple-valve principle, air builds up inside the brake pipes or air lines, releasing the brakes. Virtually all of the roadgoing vehicles equipped with air brakes have a graduated release system where a partial increase in pressure dictates a proportional release in ...

Air-brake Components in Trucks and Buses | HowStuffWorks

This lets the springs put the brakes on. A leak in the air brake system, which causes all the air to be lost, will also cause the springs to put on the brakes. Tractor and straight truck spring brakes will come fully on when air pressure drops to a range of 20 to 45 psi (typically 20 to 30 psi). Do not wait for the brakes to come on automatically.

The Parts of an Air Brake System | Georgia Commercial ...

The purpose of an air brake system on heavy duty vehicles is to convert air pressure to mechanical energy to activate the foundation brakes. Federal Motor Vehicle Safety Standard 121 dictates how this is to be done for over-the-road vehicles. The purpose of this book is to help you construct Meritor WABCO Truck and Tractor air systems.

Meritor WABCO Air Brake Systems Workbook

An air compressor maintains the proper level of air pressure so that the air brakes and any other air-powered accessories operate safely and consistently. Depending on the make and model of your heavy truck, its compressor is either gear or belt-driven and gets cooled by either air or an engine cooling system.
