The new VDA volume 5 "Capability of Measurement Processes" published in November 2010 is available as a guideline meeting all these requirements. Additionally, it is much more practice-oriented than MSA 4. Furthermore, the approach of VDA 5 is based on the ISO standard 22514-7 Capability of Measurement Processes.

The VDA volume 5 is the manual that provides guidelines on the measurement system capability assessment. The general methods are similar to the AIAG but, with a focus on the measurement uncertainty for the assessment. In this site you will find some information and tips about the following tools: Bias Analysis - Method 1 (Verfahren 1 in german).

MSA - Quality in the automotive industry
VDA Volume 5, the European equivalent of the MSA guideline, requires evaluation of measurement processes using Measurement Uncertainty which is determined via practical methods similar to the capability study, but is based on specifications from GUM (Guide to the Expression of Uncertainty in Measurement) and the DIN EN V 13005.

The procedure in the VDA 5 manual starts by choosing what the manual calls a "type 1" study, meaning bias, linearity, or stability. The results will be listed first on the uncertainty-budget form; there will be one gauge, one operator, and one reference standard unless the linearity study is chosen.
